Environment Audits

Recognitions for Green  
Initiatives

Beyond the campus activities

  
Dr. EIJU THOMAS  
PRINCIPAL  
BASELIUS COLLEGE  
KOTTAYAM

The College has taken energy and environment protection initiatives and arranged various measures, steps, and activities in this direction. The Nature Club, Bhoomithra Sena and College Beautification committee are entrusted to provide necessary awareness to staff and students on the various initiatives. Services of external agencies are availed for conducting comprehensive audit.

### **Audits**

During the years 2019 and 2020, the college conducted full fledged audit of Energy, Environment, Water and Soil. The audit relating to Green initiatives, Energy and Environment was done by a team of experts led by the School of Environmental Sciences. Orientation classes were initially arranged for staff members and students. Ambient Air Quality Monitoring was done . Audit was undertaken in connection with Water management, Soil management, Waste management , Green Initiatives, Green Practices, Carbon Foot print analysis Besides, a very detailed audit of the quality of soil and water was conducted with the help of Tropical Institute of Ecological Sciences.

The reports are available in the college website.

<https://baselius.ac.in/green-audit/>

### **Recognitions**

- In the Green audit, the college scored a score of 8.73 out of 10.
- The College participated in the Swachhta Ranking Survey by the Ministry of Human Resource Development (Education)
- External Agencies have honoured the college for its promotion of green initiatives inside and outside the campus

## Executive Summary

Green campus is a concept implemented in many educational and research institutions all over the world. It will support them to be sustainable because of their mass resource utilization and waste discharge in to the environment. Waste minimization plans for the educational institute are now mandatory to maintain the cleanliness of the campus. To find out the environmental performance of the educational institutions and to analyze the possible solutions for converting the educational campus as the Green-campus the conduction of Green Auditing of Institution is essential. The green auditing of 'Baselius' College, Kottayam, enables to assess the life style, action and its impact on the environment. The audit was mainly focused on greening indicators like consumption of energy in terms of electricity and fossil fuel, quality of soil and water, vegetation, waste management practices and carbon foot print of the campus etc. Initially a questionnaire survey was conducted to know about the existing resources of the campus and resource consumption pattern of the students and staffs in the College. In order to assess the quality of water and soil, water and soil samples were collected from different locations of the college campus and analysed for its parameters. The Mobile Ambient Air Quality Monitoring System was used for assessing the ambient air quality. Collected data was grouped, tabulated and analysed. Finally, a report pertaining environmental management plan with strength, weakness and suggestion for the green campus are documented.

# Chapter 1

## INTRODUCTION

### 1.1 About College

Baselius College was established in the year 1964 by a galaxy of eminent men to fulfil the long-cherished dream of the Malankara Orthodox Christian Community to dedicate themselves to the service of God and man. This premier postgraduate institution that flourished from the precincts of the MD Seminary High School perpetuates the sacred memory of our heavenly patron His Holiness Baselios Geevarghese-II, the late lamented Catholicos of the East, who steered the destiny of the Orthodox Church with grace and vision for more than three decades. The College is situated at the heart of Kottayam town and is easily accessible by road, rail and water transport systems.

The College stands for academic excellence, development of skill and character formation so as to produce intellectually mature, morally upright, socially committed and spiritually inspired men and women. In pursuance of this goal, the College has set the following objectives:

- To develop the potentialities of young men and women and help all those engaged in the pursuit of Truth and Knowledge, keeping in view the intellectual, physical and spiritual values.
- To inculcate a sense of discipline, social responsibility and community service in the youth and also to bring home the dignity of manual labour.

Green Audit Report 2020

1

- To provide society with the right kind of leadership through men and women trained in various spheres who are competent to tackle the problems in life and make them worthy citizens of our community and the country in general.
- To instil in the students a sense of national pride through appreciation of Indian traditions and cultures.
- To sensitise students to critique current socio-economic, political and cultural issues and to denounce all forms of oppression relating to class, caste and gender.
- To familiarise students with environmental issues, thus motivating them to promote ecological justice and sustainable development.

To establish a link between the institution and policy makers through collaborative research leading to social development.

## Vision

To be a premier temple of higher learning, imparting quality holistic education to all seekers, irrespective of caste, creed and gender.

## Mission

To dispel the darkness of ignorance and elevate youngsters to the pedestal of wisdom by fostering spirituality, knowledge and skill, thereby empowering them to deal with real life situations and equipping them to build a fruitful future for themselves and the society at large.

## Chapter 2

### PREAUDIT STAGE

#### 2.1 Objectives of green audit

This green audit's main objectives are to assess the environmental quality and the management strategies in Baselius College, Kottayam. The specific goals are:

1. To evaluate the quality of the water and soil in the Baselius college campus
2. To monitor the energy consumption pattern of the College
3. To quantify the liquid and solid waste generation and management plans on the campus.
4. To assess the carbon footprint of the College
5. To assess whether the measures implemented by Baselius College have helped to reduce the Carbon Footprint.
6. To impart environment management plans to the College
7. Providing a database for corrective actions and plans.
8. To assess whether the Institution's extracurricular activities support the collection, recovery, reuse, and recycling of solid wastes.
9. To identify the gap areas and suggest recommendations to improve the Green Campus status of the Baselius College.

#### 2.2 Target areas of green auditing

Green audit forms part of a resource management process. Although audits are individual events, the real value of green audits is that they are carried out at defined intervals, and their results can illustrate improvement or change over time. The Green-campus concept mainly focuses on efficient use of energy and water; minimize waste generation or pollution, and economic efficiency.

All these indicators are assessed in the process of “Green Auditing of this educational institute”. Green-campus focuses on reducing contribution to emissions and procuring a cost-effective and secure supply of energy. It encourages and enhances energy use conservation, promotes personal action, reduces the institute’s energy and water consumption, reduces waste to landfill, and integrates environmental considerations into all contracts and services considered

to have significant environmental impacts. Target areas included in this green auditing are water, energy, waste, green campus, and carbon footprint.

### **2.3 Auditing for Water Management**

Water is a natural resource; all living organisms depend on water. While freely available in many natural environments, potable (drinkable) water is less readily available in human settlements. Groundwater depletion and water contamination are taking place at an alarming rate. Hence it is essential to examine the quality and usage of water in the College. Water auditing is conducted to evaluate facilities of raw water intake and determine the facilities for water treatment and reuse. The concerned auditor investigates the appropriate method that can be adopted and implemented to balance water demand and supply.

### **2.4 Auditing for Energy Management**

Energy conservation is an essential aspect of campus sustainability linked with the carbon footprint of the campus. Energy auditing deals with the conservation and methods to reduce its consumption related to environmental degradation. It is therefore essential that any environmentally responsible institution examine its energy use practices.

### **2.5 Auditing for Waste Management**

Human activities create waste, and it is the way these wastes are handled, stored, collected, and disposed of, which can pose risks to the environment and public health. Pollution from waste is aesthetically unpleasing and results in large amounts of litter in our communities which can cause health problems. Solid waste can be divided into three categories: biodegradable, non-biodegradable and hazardous waste. Bio-degradable wastes include food wastes, canteen waste, wastes from toilets, etc. Nonbiodegradable wastes include what is usually thrown away in homes and schools, such as plastic, tins, glass bottles, etc. Hazardous waste is likely to threaten health or the environment, like cleaning chemicals, acids, and petrol. Unscientific management of these wastes, such as dumping in pits or burning them, may cause the harmful discharge of contaminants into soil and water supplies and produce greenhouse gases contributing to global climate change, respectively. Particular attention should be given to the handling and management of hazardous waste generated in the College. Bio-degradable waste can be effectively utilized for energy generation purposes through anaerobic digestion or converted to fertilizer by composting technologies. Non-biodegradable waste can be used through

*B. Thomas*  
Dr. BIJU THOMAS  
PRINCIPAL  
BASELIUS COLLEGE  
KOTTAYAM

recycling and reuse. Thus the minimization of solid waste is essential to a sustainable college. The auditor diagnoses the prevailing waste disposal policies and suggests the best way to combat the problems.

## **2.6 Auditing for Green Campus Management**

Trees play an important ecological role within the urban environment and support improved public health and provide aesthetic benefits to cities. A single mature tree will absorb up to 48 pounds of carbon dioxide from the atmosphere and release it as oxygen in one year. The amount of oxygen released by the campus trees is right for the people on the campus. So while you are busy studying and working on earning those good grades, all the trees on campus are also working hard to make the air cleaner for you.

## **2.7 Auditing for Carbon Footprint**

The burning of fossil fuels (such as petrol) impacts the environment through the emission of greenhouse gases into the atmosphere. The most common greenhouse gases are carbon dioxide, water vapour, methane, nitrous oxide, and ozone. Of all the greenhouse gases, carbon dioxide is the most prominent greenhouse gas, comprising 402 ppm of the Earth's atmosphere. The release of carbon dioxide gas into the Earth's atmosphere through human activities is commonly known as carbon emissions. Vehicular emission is the primary source of carbon emission on the campus; hence assessing the method of transportation practiced in the College is essential.

## **2.8 Methodology Adopted**

The methodology adopted to conduct the Green Audit of the Institution had the following components

### **Onsite Visit**

The Green Audit Team conducted field visits. The visit's key focus was on assessing the status of the green cover of the Institution, their waste management practices and energy conservation strategies, etc. The sample collection (water, soil) was carried out during the visits. The water samples from two open wells and two tap water sources were taken, and soil samples from three different campus places were collected. The sample collection, preservation, and analysis were done scientifically as prescribed by the standard procedures.

*Bijju Thomas*  
8  
Dr. BIJU THOMAS  
PRINCIPAL  
BASELIUS COLLEGE  
KOTTAYAM

## Focus Group Discussion

The Focus Group discussions were held with the nature club, bird club members, staff members, and the management, focusing on Green Audit's various aspects. The meeting was focused on identifying the attitudes and awareness towards environmental issues at the institutional and local levels. **Energy, waste management and Carbon footprint analysis Survey**

With the help of teachers and students, the audit team has assessed the energy consumption pattern and waste generation, disposal, and treatment facilities of the College. The monitoring was conducted with a detailed questionnaire survey method.

## Survey forms

### 2.1 Water management

SL NO	PARAMETERS	Response	Remarks
1	Source of water		
2	No of Wells		
3	No of the motors used		
4	Horsepower – Motor		
5	Depth of well –Total		
6	Water level		
7	Number of water tanks		
8	Capacity of tank		
9	Quantity of water pumped every day		
10	Any water wastage/why?		
11	Water usage for gardening		
12	Wastewater sources		
13	Use of wastewater		
14	The faith of wastewater from labs		
15	Whether wastewater from labs mixed with groundwater		
16	Any treatment for lab water		
17	Whether any green chemistry method practiced in labs		
18	No of water coolers		
19	Is rainwater harvest available?		

20	No of units and amount of water harvested		
21	Any leaky taps		
22	Amount of water lost per day		
23	Any water management plan used?		
24	Any water-saving techniques followed?		
25	Are there any signs reminding peoples to turn off the water?		

## 2.2 Energy audit

Room No./name	Electrical device/ items	Number	Power	usage time (hr/day)

Item: Bulbs (CFL, incandescent, LED); A/c, fan, computer, instruments

## 2.3 Waste management

Approximate quantity of waste generated per day (in kg) *Office*

Approx	Biodegradable	Non - biodegradable	Hazardous	Others
<1Kg				
2-10Kg				
>10Kg				

## Laboratories

Approx	Biodegradable	Non - biodegradable	Hazardous	Others
<1Kg

## Chapter 3

### AUDIT STAGE

Green auditing in **Baselius College, Kottayam** began assessing the status of the green cover of the Institution followed by waste management practices and energy conservation strategies, etc. The team monitored different facilities at the College. Auditing determined types of appliances and utilities (lights, taps, toilets, fridges, etc.) and measured the usage per item. The audit identified the relevant consumption patterns (such as how often an appliance is used) and their impacts. The staff and learners were interviewed to get details of usage, frequency, or general characteristics of individual devices.

Data collection was done in the sectors such as Energy, Waste, Greening, Carbon footprint, and Water use. College records and documents were verified several times to clarify the data received through surveys and discussions. The environmental samples, including water, soil, and various campus locations, were collected and analyzed at the School of Environmental Sciences, Mahatma Gandhi University.

#### **3.1 Student Clubs and Forums Involved**

Nature Club, Bhoomithrasena Club, N.S.S, N.C.C, and Department level associations were involved in the green audit of the college.

#### **3.2 Review of Documents and Records**

The documents like admission registers, electricity and water charge remittance records, laboratory equipment registers, and office registers were examined and data were collected. Academic calendar, college magazines, annual report of the college and NAAC self-assessment reports, etc. were also verified as part of data collection.

#### **3.3 Review of policies**

The audit team discussed the environmental management aspect of the college with the management. They will modify/revise the green policies with respect to the green auditing.

#### **3.4 Interviews**

In order to collect information for green auditing interviewed office staff, Principal, teaching and non-teaching staff, students and other stakeholders of the college. Discussions were also made with the PTA office bearers to clarify doubts regarding certain points.

Dr. B. J. THOMAS  
PRINCIPAL  
BASELIUS COLLEGE  
KOTTAYAM

### 3.5 Site inspection

The audit team visited the College and its premises several times to gather information. Campus trees were counted and identified, Various gardens, play grounds, canteen, library, office rooms and parking grounds were also visited to collect data. Number and type of vehicles used by the stakeholders were counted and fuel consumption for each vehicle verified. Number of LPG cylinders used in labs, canteen and hostel kitchen were also counted. Site for air sampling was fixed. The audit team finalised the locations and sources for soil and water sampling.

KOTTAYAM

## Chapter 4

### POST AUDIT STAGE

#### 4.1 Ambient Air Quality Monitoring

**Date: 27<sup>th</sup> November, 2019 to 25<sup>th</sup> December, 2019** Description of the  
**Monitoring Site:**

Baselius College established in 1964 situated in the heart of Kottayam. The college is ideal for sampling in traffic congested area and also for sensitive location due to its closeness to the city centre and to the District Hospital, Kottayam.

The School of Environmental Sciences, Mahatma Gandhi University, Kottayam conducted air quality monitoring at the premise of the institute during 27th November, 2019 to 25th December, 2019. Monitoring was done using the ambient air quality monitoring van (Fig. 4.1) to understand the status of air quality for various pollutants and also to identify the major pollutants in the area. As part of the Monitoring programme, air pollutants such as Particulate matters (PM<sub>10</sub>, PM<sub>2.5</sub>), SO<sub>2</sub>, NO<sub>2</sub>, O<sub>3</sub> and CO were analysed.

**Fig. 4.1** Mobile ambient air quality monitoring van

The mean daily concentration of PM<sub>10</sub> is  $33.77 \pm 17.89 \mu\text{g}/\text{m}^3$ , PM<sub>2.5</sub> ( $42.66 \pm 16.73 \mu\text{g}/\text{m}^3$ ), SO<sub>2</sub> ( $6.53 \pm 1.21 \mu\text{g}/\text{m}^3$ ), NO<sub>2</sub> ( $21.61 \pm 7.57 \mu\text{g}/\text{m}^3$ ), CO ( $2.8 \pm 0.43 \mu\text{g}/\text{m}^3$ ) and O<sub>3</sub> ( $26.20 \pm 10.94 \mu\text{g}/\text{m}^3$ ). The National ambient air quality standard (NAAQS) for PM<sub>10</sub> ( $60 \mu\text{g}/\text{m}^3$ ) has exceeded 5 times and PM<sub>2.5</sub> ( $40 \mu\text{g}/\text{m}^3$ ) exceeded 13 times during the study period (Fig. 4.3). Both PM<sub>10</sub> and PM<sub>2.5</sub> has exceeded the WHO standard many times during the monitoring period. The average value for PM<sub>2.5</sub> in the study area is just above the NAAQS value, while PM<sub>10</sub> is well below the NAAQS. The maximum concentration of PM<sub>10</sub> observed on 5<sup>th</sup> December and for PM<sub>2.5</sub> it was on 25<sup>th</sup> December, 2019. The hourly average value for both PMs

has exceeded annual and 24 hr mean value prescribed by NAAQS (Fig. 4.4). Maximum concentration of PMs observed during morning and evening hours. The vehicular traffic may enhance the value for PMs in the area. The concentration of NO<sub>2</sub> also shows a similar trend and implies the strong influence of vehicular traffic to the air quality depletion in the study area. The hourly concentration of O<sub>3</sub> shows that the concentration is maximum in the noon time with maximum peak during 02.00PM to 03.00PM. A gradual increase in the concentration of O<sub>3</sub> can be observed as the temperature increases and becomes almost zero during the night.

Table 4.1 shows the national ambient air quality index and corresponding health impacts. The Daily average concentration of Pollutants and corresponding Air Quality Index (AQI) is provided in Table 4.2. The AQI calculated shows that majority of the days are in satisfactory condition for air quality and only five days are reported to be in moderate condition. The moderate condition in air quality was reported during the Christmas days. It may be due to the increased vehicular movement during the festival period. The monitoring results show that PM<sub>10</sub> and PM<sub>2.5</sub> are the major pollutants in the area followed by NO<sub>2</sub>

## 4.2 Water Quality assessment

The samples were collected, preserved, and transported to the lab and analyzed for various physio-chemical parameters. The details of water samples are as follows;

**Table 4.3.** Sampling locations

Sample	Area
I	Rainwater and Municipality water
II	Well water I- near Chem Laboratory
III	Municipality water
IV	Well water II - College ground

The harvested rainwater is directly pumping into the water tank and then feed to the purifier for usage.

The significant parameters analyzed include pH, Conductivity, Total Dissolved Salts (TDS), Salinity, Alkalinity, Total Hardness, and E.coli. The results are presented in Table 4.4. The results are comparable with the values of drinking water standards prescribed by different agencies.

 BASELIUS COLLEGE  
 KOTTAYAM

All the water samples are within the permissible limit given by standard organisations.

### Water Management

Wells and Municipality water are the primary sources of the College's water. The College has two wells about 16 feet deep and 8 feet water level (Table 4.5). There are four motors of one horsepower each for pumping water to the three tanks of 30000 litre capacity. 35000 litre water is pumped every day to meet the requirements of the College. About 300 litres of water is spent daily on gardening. There are two coolers in the College. About 20,000 litre water is harvested through Rainwater harvesting. Water management is effectively done in the College, addressing various water wastage issues, waste water from labs and leaky taps, and adopting efficient water-saving strategies. Students are aware of the need for saving water through the signboards kept at various places in the College.

**Table 4.5** Water management in campus

Sl No	PARAMETERS	Response	Remarks
1	Source of water	Well	
2	No of Wells	2	
3	No of the motors used	4	
4	Horsepower – Motor	1 HP- 4 nos.	
5	Depth of well –Total	16 ft - well no:1 8 ft- well no: 2	
6	Number of water tanks	3	
7	Capacity of tank	30000 L-3	
8	Quantity of water pumped every day	35000L	
9	Any water wastage? If yes, why?	Nil	
10	Water usage for gardening	300L/day	
11	Wastewater sources	Lab, canteen	
12	Use of wastewater	Nil

 BASELIUS COLLEGE  
 KOTTAYAM

**Fig. 4.5** Rainwater harvesting tank

**Soil Management**

The samples were collected, preserved, and transported to the lab and analyzed for various physio-chemical parameters. The details of soil samples are as follows

**Table 4.6** Soil sampling locations

Soil samples	Area
I	Near College canteen
II	Near College auditorium
III	College Chem lab-near butterfly garden
IV	College ground

**Table 4.7** Soil analysis results

Parameters	Sample I	Sample II	Sample iii	Sample Iv
pH	7.2	5.4	7.1	7.0
Nitrogen (mg/100g)	1.2	1.2	0.98	1.3

*Biju Thomas*  
 Dr. BIJU THOMAS  
 PRINCIPAL  
 BASELIUS COLLEGE  
 KOTTAYAM

Phosphorus (mg/100g)	0.15	0.75	0.12	0.73
Potassium (Kg/ha)	152.55	152.55	58.33	98.71
Organic carbon (OC) (%)	3.8	3.6	3.4	3.6

The soil samples were analysed to determine the parameters pH, NPK, and organic carbon. The soil productivity is determined primarily by organic matter, which constitutes less than 5% of the soil. OC content in the samples was ranged from 3.4% to 3.8%. Overall, the soil quality is good.

### Energy Audit Report

Table 4.8 shows the energy consumption pattern of the College for a month. The one-month electricity bill amount is around Rs. 60,000/-.

### Waste management

Waste management is an important measure to convert a campus into ecofriendly that needs adequate attention. Different types of wastes are generated on a college campus; its collection and management are very challenging. The following data provide the details of the waste generated and the disposal method adopted by the College.

**Table 4.9** Waste management

Types of Waste	Particulars	Disposal Methods
E-waste	Electrical and Electronic parts, Computers, Printers, UPS, etc.	Direct selling
Chemical waste	Laboratory waste	Neutralize with water
Wastewater	Urinals, washing, and bathrooms	Soak pits
Solid waste	Damaged furniture, Paper waste, paper plates, paper cups, etc	Reuse after maintenance, Energy conversion
Plastic waste	Plastic water bottles, Plastic containers, pens, Refill, etc.	Direct selling
Food waste	Classroom food waste and canteen food waste	Disposal in the food pit
Sanitary Napkin		Napkin incinerator
Glass waste	Broken glassware	Direct selling

To maintain the zero organic waste protocol throughout the campus, the College had taken the following measures. The food waste generated by the students and staff is taken by them to their own homes so that minimum waste is generated inside the campus. The organic waste generated in the

*Biju Thomas*  
 Dr. BIJU THOMAS  
 PRINCIPAL  
 BASELIUS COLLEGE  
 KOTTAYAM

canteen and campus is also disposed of correctly in the food waste pit arranged on the campus. The chemicals from the laboratories are disposed of in a sealed tank and water to undergo neutralization with water.

### **Routine Green Practices**

Every year college celebrates World Environment Day, World Water Day, and Ozone Day on the campus. The main focus of these programs was to provide awareness to the students about the importance of the environment,

*Biju Thomas*  
 Dr. BIJU THOMAS  
 PRINCIPAL  
 BASELIUS COLLEGE  
 KOTTAYAM

conservation, and sustainable use of environmental resources. The programs are conducted through seminars, poster presentations, quiz competition debates, etc.

### Carbon Foot Print Analysis

The details of the carbon footprint analysis in the campus is as follows

**Table 4.11.** Carbon footprint analysis

1	Total number of vehicles used by the stakeholders of the College (per day)	150(Approximately)
2	No of the cycles used	Nil
3	No of two-wheelers used (average distance travelled and quantity of fuel and amount used per day)	Student-90, Teachers-09, Non-teaching staff-10, Visitors- 08
4	No of three-wheeler used (average distance travelled and quantity of fuel and amount used per day)	Auto: 1
5	No of cars used (average distance travelled and quantity of fuel and amount used per day)	Student-2, Teachers- 20, Non-teaching staff- 2, Visitors - 08
6	No of persons using public transportation	1468
7	No of persons using college conveyance	Nil
8	Number of generators used per day	2+1(Hostel)=3
9	Amount of fuel used	Rs.300 per month
10	Amount of Taxi/Auto charges and amount of Fuels (Approximately)for the transportation of office goods to the College per month	Rs.500
11	Number of LPG cylinders used in canteen/labs	7 (4 Labs + 3 Canteen)

*Biju Thomas*  
 Dr. BIJU THOMAS  
 PRINCIPAL  
 BASELIUS COLLEGE  
 KOTTAYAM

12	Amount of Taxi/Auto charges and amount of Fuels (Approximately)for the transportation of Vegetables/other materials per month	Rs.500
13	Use of any other fossil fuels in the College	Nil
14	Any suggestion to reduce the use of fuel	Nil

Greenhouse gases, including carbon-containing gases carbon dioxide and methane, can be emitted through the burning of fossil fuels, roads, transportation, and other services. Atmospheric carbon dioxide levels, the most dangerous and prevalent greenhouse gas, are at the highest level ever recorded. The emission of carbon dioxide is caused mainly due to human activities. Vehicular emission is the primary source of carbon emission on the campus. The method of transportation that is practiced in the College is to be assessed carefully.

According to the green audit conducted inside the College, the total number of vehicles used by the stakeholders is approximately 150, including two, three, and four wheels. The others use public transportation systems. The main source of fuel used in the college canteen is firewood. LPG cylinder used is limited to seven in the canteen and lab. We try to be carbon neutral in every way we can.

## **SUGGESTIONS AND RECOMMENDATIONS**

### **Water Management**

The water sources are safe in terms of contamination. The food waste produced by students are collected and taken by persons from outside on daily basis. It helped in the management of organic waste in the campus.

*Biju Thomas*  
 Dr. BIJU THOMAS  
 PRINCIPAL  
 BASELIUS COLLEGE  
 KOTTAYAM

The wells can be recharged with rainwater from the rooftops of the new buildings.

Rainwater for laboratory purposes – Construction of a 10000L rainwater harvesting tank can satisfy the laboratory's need, especially in distillation units where water is lost as coolant. The rainwater from the harvesting tank can be used as source water and a coolant for the distillation unit.

Rainwater can also be used as the source of drinking water. The coolant water can be recycled through a separate plumbing system.

The capacity of the distillation unit in the College is 1 L / hour. The amount of water used as a coolant for 1L of distilled water is 60L. Annually, the unit requires approximately 1500L of water as the coolant, and this much water can be saved with the construction of the harvesting tank.

The nature clubs and BMC club can arrange awareness programs for water and energy conservation. There should be proper monitoring of water consumption patterns on the campus.

  
Dr. BIJU THOMAS  
PRINCIPAL  
BASELIUS COLLEGE  
KOTTAYAM

**Fig. 4.12 Schematic diagram of water harvesting and its utilisation  
Energy management**

The energy audit recommends avoiding using more energy-consuming electrical appliances and replacing them with more environment-friendly and energy-efficient appliances (for example, five stars rated Air conditioner) in

*Dr. Biju Thomas*  
**Dr. BIJU THOMAS**  
 PRINCIPAL  
 BASELIUS COLLEGE  
 KOTTAYAM

the College. The potential of renewable energy sources has to be explored; for example, installation of solar panels for street lighting and office uses.

It is recommended to install the following solar-powered appliances on the campus;

Solar-powered street lights and LED display board

Solar powered office

### **Green Campus**

In order to increase the carbon credit and greenery of the campus, it is recommended to plant more indigenous and evergreen/fruit trees inside the campus.

### **Waste Management**

Try to avoid the use of plastic on the campus and encourage biodegradable materials as alternatives. Try to achieve the goal of a plastic-free campus.

Leaf litter from the campus can be effectively used for aerobic/vermicomposting so that the composted material can also be used as good manure.

Recycle the paper waste instead of incinerating or burning.

### **General list of recommendation**

- Indoor plants have to be kept in class rooms and long corridors.
- Planting trees in the campus is not possible due to space constraints. Hence the vertical garden will be a good practice for reducing the carbon footprint
- Green audit shall be conducted in specific intervals.
- Set up a collection centre for E-waste

  
Dr. BIJU THOMAS  
PRINCIPAL  
BASELIUS COLLEGE  
KOTTAYAM

- Solar panels shall be installed to generate electricity • More number of rain water harvesting tanks shall be installed.
- Follow green protocol in all the programmes.
- Conduct environmental awareness programmes for students regularly.

BASELIUS COLLEGE  
KOTTAYAM

## GREEN AUDIT-WATER AND SOIL MANAGEMENT

Environmental auditing is a process where by an organization's environmental preference is tested against the environmental policies and objectives. As part of such policies internal environmental audit (Green Audit) is conducted to evaluate the actual scenario of the campus.

### Objectives

To assess the quality of water and soil in the Baselius College Campus, Kottayam.

### Water Management

Sources of water in the College Campus are well water, municipality water and rain water. These water resources are always susceptible to contamination by unintentional wastes. The quality of the water can be tested by analysing it for different quality parameters. If any contaminants are present water treatment options are available to improve our water quality. Of the two well water resources one is used for drinking purpose and the other one is used for household purposes of College hostel. The tap water is used for all other purposes for which the sources are harvested rain water and municipality water. The usage of water in labs is reduced by conducting microscale experiments.

The soil and water samples were collected and analysed at **Tropical Institute of Ecological Sciences, Vellor P.O, Kottayam** according to the standard methods like Flame photometry, UV-Visible Spectrophotometry, Kjeldahl's method, Complexometry, Acidimetry and Conductometry.

### Onsite visit

To assess the green cover of the Institution a few days visit was conducted by the Green Audit team. The soil and water sample collection was carried out during the visit.

The sampling areas of water samples by the College Campus are given in Table I.

**Table I**

Sample	Area
I	Rainwater and Municipality water
II	Well water I- near Chem Laboratory
III	Municipality water
IV	Well water II - College ground

These water samples were analysed for its quality parameters. The quality parameters include pH, Conductivity, Total Dissolved Salts (TDS), Salinity, Alkalinity, Chlorinity, Total Hardness, Ca<sup>+</sup> ions, Mg<sup>+</sup> ions, MPN count (Most probable number) and E.coli.. The data obtained are given in Table

BASELIUS COLLEGE  
KOTTAYAM

**Table IV**

Sl No	Sample I	Sample II	Sample III	Sample IV	Parameters
1	7.2	5.4	7.1	7.0	pH
2	1.2	1.2	0.98	1.3	Nitrogen (N)
3	0.15	0.75	0.12	0.73	Phosphorus(mg/100g)
4	152.55	152.55	58.33	98.71	Potassium (Kg/ha-1)
5	10.5	10.5	9.8	10.6	Organic carbon (OC) (%)

The soil samples were analysed to determine the parameters pH, NPK and organic carbon. The soil productivity is determined primarily by organic matter which constitutes less than 5% of the soil. Here the samples contain about 10% organic carbon. Most crops perform best and a wide range of nutrients are available with a soil of pH between 6 and 7. Here all soil samples were found suitable for gardening plants and its suitability decreases in the order Sample I > Sample II > Sample IV > Sample III. By proper recommendation the fertility of sample III can be enhanced. The results can be expressed as:
